

Astimax® Voice over IP phone system

Astimax® voice solutions are revolutionizing the way businesses communicate. Advanced features combined with our reliable phone systems, best-of-breed customer support, and high quality technology partners help you get more from your business VoIP telephone system. The Astimax® IP-phone-System is a completely scaleable and individually configurable IP phone system. Through its ability to communicate over multiple protocols the Astimax® can integrate existing phone infrastructure. The Astimax® phone system offers voice mailboxes, interactive voice response and supports SIP, IAX2 and SCCP protocols. The basic system can be connected to one Basic Rate Interface (BRI) port. Depending on the configuration up to 28 Primary Rate interfaces are available.

Astimax® services – Voice services that keep your business a step ahead

- **Improve communications ROI**—Combine voice over IP and data services onto one single network, reduce capital costs, and simplify administration.
- **Increase productivity**— improve productivity by reducing wasted time playing "phone tag", with integrated web and telephone conferences, and increase user control with web-based set-up and customization.
- **Telephony integration**—The Astimax® system integrates into your communication infrastructure. It will terminate calls either over PSTN, GSM or VoIP using SIP or IAX2 protocols.
- **Voice-Mailbox System** - Receive, forward voice mail via email, listen to messages while on travel. Via the Astimax® web interface individual settings can be easily changed over an internet connection.
- **Incoming Caller Distribution (ICD)** -Set-up different caller groups and route your calls efficiently through your organisation. It is even possible to program the order how incoming calls are distributed to your phone extensions.
- **Call-Routing** - Set up individual call routing either via web or phone. Available settings are permanent call forward, only while busy or for a defined time period.
- **Seamless transition**—Keep your existing phone numbers, or even parts of your existing phone infrastructure
- **Conference server** - The integrated conference server allows the use of up to 99 virtual conference rooms optional with or without password protection.
- **Administration** - Easy web administration allows the management of all features of the phone system and gives you control over call flow, handling and users
- **ENUM support** - The system uses official databases to identify users who can be reached cost-efficiently through the web
